DETAILED ACTION

Allowable Subject Matter

Claims 1-24 are allowed.

The following is an examiner's statement of reasons for allowance:

Cheung et al., US Patent No. 6,515,964, discloses a method and apparatus for dynamically controlling the admission of calls to a network, and Flanagan et al., US Patent Application Publication No. 2002/0105909, discloses a system called "Quality-of-service monitor". Both Cheung et al. and Flanagan et al. do not teach or fairly suggest the following features, which are recited in each independent claim of the present application:

A method of reporting call quality for a call on a network, comprising:

receiving messages associated with the call, the messages including a set of call quality metrics;

comparing at least one of the set of call quality metrics to at least one of a set of associated thresholds, at intervals of time, for determining whether call quality is one of a set of call qualities for the designated time interval; and

determining at least one percentage of at least one call quality from the set of call qualities received for all of the time intervals for the call as recited in independent claims 1, 10, 14, 17-18 and 21-22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
